Continuation of 13. Other: Applicant states that the Riek reference does not disclose the claimed encoding of I picture data and P or B picture data "such that motion vectors are 0 for each entire frame and a chronologically preceding picture is copied as the encoding picture". Applicant descreibes two options presented in Riek: encoding a video sequence until receipt of a next reference frame, or repeatedly sending a selected image until it is encoded as an I or P picture (column 9: lines 41-67). Although Riek discusses potential problems and limitations with these methods, it goes on to present solutions. In one solution, B pictures are encoded entirely with skipped macroblocks or macroblocks with zero motion vectors (column 10: lines 53-65). Such a picture, comprising skipped macroblocks, which are then copied from a chronologically preceding picture, and motion-compensated with zero motion vectors, is the claimed "P or B picture data" with 0 motion vectors for an entire frame (a skipped macroblock inherently has a zero motion vector), copied from a chronologically preceding picture. Accordingly, the amendments to the claims are insufficient to overcome the rejections under 35 U.S.C. 103.

Applicant additionally requests a reference in support of the statement made that a correlated 1:1 ratio of audio and video packets was known in the art at the time of the present invention, interpreted as the claimed time period of video data having the same time time period of audio data. Accordingly, Wilt, A.J., "The DV, DVCAM, & DVCPRO Formats" is added to the record. This document, dated 16 May 1999, discusses locked and unlocked audio as described in the statement of Official Notice, and why encoding video with locked audio was known to be considered beneficial.
